POWER-SPRAYS

WATER AND LIQUID ADMIXTURE DISPENSER

Accurate dispensing of the liquids used in Glass fibre Reinforced Concrete production is vital for both quality and cost control. The Power-Sprays automatic liquid dispensing systems enable this with the push of a single button.

Each system comprises a volumetric measuring cylinder with graduated scale, 2 adjustable level sensors, discharge valve, refill pump (or valve in the case of water) and control.

Systems are available for the accurate control of water, plasticisers, accelerators, retarders, polymers and most other liquid admixtures used in the GRC industry. Capacities range from 500 ml to 25 L.

Power-Sprays also offer a wide choice of batch weighing systems for both liquid and dry materials.

For more detailed information and product specification, please contact your local agent or our UK based sales team
